

Team 4

API & Service Delivery Assignments

Division 4 — Platform Operations & Communication

Team Lead: Al Anoud

5 developers · 10 models · 44 API endpoints to deliver

Overview

This document lists, for every developer on Team 4 (Division 4 — Platform Operations & Communication), the models she owns and the concrete set of API endpoints to deliver for each one. Each endpoint listed below should be implemented end-to-end: repository method (data access) → service method (business rules/validation) → controller action (HTTP endpoint), following the empty scaffolding already generated in the project.

Developer	Assigned Models	Endpoints
Al Anoud	TraineePayment, TraineePaymentSchedule, CompanyPayment, CompanyPaymentSchedule	16
Shrouq	Notification, Announcement	10
Manar	Certificate, Report	8
Zahraa	Message	5
Malak	SystemSetting	5

How to use this document

- **Model** — the EF Core entity already scaffolded in `Models/`, with its empty repository, service, and controller waiting in their respective folders.
- **Method / Endpoint** — the HTTP verb and route to implement in the entity's controller.
- **Description** — the business functionality that endpoint must deliver; use it to design the service-layer logic and any validation rules before wiring the repository call.

Routes and names are a recommended starting convention — refine naming as needed, but keep the underlying functionality and coverage intact.

4 model(s) · 16 endpoints to deliver

TraineePayment

Method	Endpoint	Business Functionality
GET	/api/TraineePayment/enrollment/{enrollmentId}	Billing record for a trainee's enrollment
GET	/api/TraineePayment/{id}	Payment details with schedule
POST	/api/TraineePayment	Create a trainee billing record
PUT	/api/TraineePayment/{id}/status	Update overall payment status

TraineePaymentSchedule

Method	Endpoint	Business Functionality
GET	/api/TraineePaymentSchedule/payment/{traineePaymentId}	Installment schedule for a payment
POST	/api/TraineePaymentSchedule	Generate monthly installments
PUT	/api/TraineePaymentSchedule/{id}/mark-paid	Record a paid installment
GET	/api/TraineePaymentSchedule/overdue	Overdue installments report

CompanyPayment

Method	Endpoint	Business Functionality
GET	/api/CompanyPayment/company/{companyId}	Billing records for a company
GET	/api/CompanyPayment/{id}	Payment details with schedule
POST	/api/CompanyPayment	Create a company billing record for a batch
PUT	/api/CompanyPayment/{id}/status	Update overall payment status

CompanyPaymentSchedule

Method	Endpoint	Business Functionality
GET	/api/CompanyPaymentSchedule/payment/{companyPaymentId}	Installment schedule for a payment
POST	/api/CompanyPaymentSchedule	Generate monthly installments
PUT	/api/CompanyPaymentSchedule/{id}/mark-paid	Record a paid installment
GET	/api/CompanyPaymentSchedule/overdue	Overdue installments report

DEVELOPER

Shrouq

Team 4 | Division 4 — Platform Operations & Communication

2 model(s) · 10 endpoints to deliver

Notification

Method	Endpoint	Business Functionality
GET	/api/Notification/user/{userId}	A user's notifications (unread first)
POST	/api/Notification	Create a system-generated notification (usually internal)
PUT	/api/Notification/{id}/read	Mark a notification as read
PUT	/api/Notification/user/{userId}/read-all	Mark all notifications as read
GET	/api/Notification/user/{userId}/unread-count	Unread badge count

Announcement

Method	Endpoint	Business Functionality
GET	/api/Announcement/scope/{scopeType}/{scopeId}	Announcements for a batch/company/platform
GET	/api/Announcement/{id}	Announcement details
POST	/api/Announcement	Publish a broadcast announcement
PUT	/api/Announcement/{id}	Edit an announcement
DELETE	/api/Announcement/{id}	Retract an announcement

DEVELOPER

Manar

Team 4 | Division 4 — Platform Operations & Communication

2 model(s) · 8 endpoints to deliver

Certificate

Method	Endpoint	Business Functionality
GET	/api/Certificate/enrollment/{enrollmentId}	Certificates issued for an enrollment
POST	/api/Certificate	Issue a certificate on completion
GET	/api/Certificate/{id}/download	Download a certificate file
GET	/api/Certificate/trainee/{traineeId}	All certificates earned by a trainee

Report

Method	Endpoint	Business Functionality
GET	/api/Report	List previously generated reports (filter by type/user)
POST	/api/Report/generate	Generate a new report (attendance/performance/financial/etc.)
GET	/api/Report/{id}	Report metadata/filters used
GET	/api/Report/{id}/download	Re-download a past report

DEVELOPER

Zahraa

Team 4 | Division 4 — Platform Operations & Communication

1 model(s) · 5 endpoints to deliver

Message

Method	Endpoint	Business Functionality
GET	/api/Message/conversation/{userId1}/{userId2}	Message thread between two users
GET	/api/Message/inbox/{userId}	A user's received messages
POST	/api/Message	Send a direct message
PUT	/api/Message/{id}/status	Update delivery/read status
GET	/api/Message/user/{userId}/unread-count	Unread message badge count

DEVELOPER

Malak

Team 4 | Division 4 — Platform Operations & Communication

1 model(s) · 5 endpoints to deliver

SystemSetting

Method	Endpoint	Business Functionality
GET	/api/SystemSetting	List all platform settings
GET	/api/SystemSetting/{key}	Get a setting by key
PUT	/api/SystemSetting/{key}	Update a setting value
POST	/api/SystemSetting	Create a new setting
DELETE	/api/SystemSetting/{id}	Remove a setting
